Installation guide

Prerequisits

- The application can be executed on any operating system where is installed the Java Virtual Machine. It can be downloaded at: https://www.java.com/it/download/.
- It's required that MySql is installed . It has to be running on 8080 port.

The CD supplied with this guide contains one file zip named "ClusteringQualityThreshold.zip", it's necessary to unzip the file in the desired directory in which you want to install the projects parts, the executables are in the setup folder.

After that is necessary that the script provided is loaded correctly. The CD contains two sql files : "table.sql" and "testTables.sql". The first one contains the table "playtennis" and "prodotti", it is used to try the software. The second one contains tables to test class methods. Both dumps needs that on the SQL server there isn't a database called "mapdb" or the dumps won't work, also is needed a user called "MapUser" with password "map" registered on mySql.

How to start the server

Double click on the "StartServer.bat" in the "setup/QTServer" directory.

How to start the client

After starting the server process double click "StartClient.bat" in the "setup/QTClient" directory.
